DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 31-41 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 9-27 of U.S. Patent No.

6,195,882 to Tsukamoto et al, hereinafter '882. Although the conflicting claims are not identical, they are not patentably distinct from each other because the subject matter claimed in the instant application is fully claimed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows:

The 882 claim a method for forming a printed wiring board (PWB) of the present invention including the following steps:

forming a first wire pattern on a surface of a first releasable supporting sheet;

forming a second wiring pattern on a surface of a second releasable supporting sheet placing the first releasable supporting sheet on one surface of a first adhesive

Art Unit: 3729

insulator sheet having holes filled with a first conductive material, and embedding the first wiring pattern in the first adhesive insulator sheet so that the first wiring pattern is connected with the first conductive material (see claim 9, lines 28-48+);

placing the second releasable supporting sheet on the other surface of the first adhesive insulator sheet, and embedding the second wiring pattern in the first adhesive insulator sheet so that the second wiring pattern is connected with the first conductive material (see claim 9, lines 45-58);

and removing the first and second releasable supporting sheets from the first adhesive insulator sheet (see claim 9, lines 44 and 59).

As per claim 32 (compare claim 13).

As per claims 33-41 (compare claims 12, for conductive paste, claims 11 and 12, for plating and printing on the surface of release support, compare claims 14-16 for the limitations of claim 37-41 i.e., including the insulator sheet being semi hardened state and/or being a glass epoxy pre-preg, etc.,).

Prior Art References

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Prior art references are cited for their teaching of a method for producing multiple printed wiring board or the like.
